

**ENERGY STAR® :  
ANOTHER BENEFIT  
OF BUYING NEW**

## TWO COMPANIES, ONE BELIEF

Mattamy and ENERGY STAR® share a belief that you can improve people's lives by bettering their home. This made supporting the ENERGY STAR® program a simple decision to make. As an industry leader, we had a responsibility to lead by example. And the EnerQuality Hall of Fame award recently given to our founder and CEO, Peter Gilgan, shows we've done just that.

# FEEL THE ENERGY STAR® DIFFERENCE IN YOUR NEW HOME

Buying a new Mattamy ENERGY STAR® home means choosing a home built to make you feel more comfortable. Enjoy a consistent interior temperature, better air quality, and lower utility bills with improvements such as:

★ A tighter exterior envelope seal that helps reduce heat loss, drafts, moisture, dust, pollen, and noise

- ★ Increased insulation above OBC requirements in the walls, attic, and around the foundation, lowering heating and cooling costs
- ★ Triple-glazed ENERGY STAR®-qualified windows include three panes for greater energy efficiency through reducing energy costs by more than 10% due to high-efficiency Low E Argon glass, increased impact resistance, and sound insulation
- ★ More efficient lighting, heating, air conditioning, ventilation, and water heating systems

# HOMES THAT HELP THE WORLD

While our homeowners will notice a more comfortable home and lower utility bills, the biggest impact their home is making is on the home we share together. As ENERGY STAR® homes require less fossil fuels in order to operate, they leave more resources for future generations, and cause less greenhouse gases to be emitted into the atmosphere.

- ☆ 16,316 – Number of Mattamy ENERGY STAR®-qualified homes
- ☆ \$27,000,000 – Total energy costs saved
- ☆ 1,580,200 GJ – Total energy saved
- ☆ 45,591,460 litres – The equivalent amount of gasoline saved

**Mattamy ENERGY STAR®  
homes have reduced  
greenhouses gases by  
almost 140,000 tons.**

# EXCEEDING INDUSTRY STANDARDS BY AT LEAST 20%

Mattamy builds 20% above the Ontario Building Code standard. This means that when you buy a new Mattamy ENERGY STAR® home, you're benefitting from energy-efficient improvements such as:

- ★ Continuous exterior insulation throughout the home (attic, walls, and basement) results in lower heating & cooling costs, more consistent temperatures, and a quieter interior
- ★ High-efficiency heating system reduces energy costs
- ★ 95% Energy-Efficient Hot Water Heaters lower total energy usage
- ★ Heat Recovery Ventilation allows for fresh air circulation through the home

- ★ Smart programmable thermostat allows for efficient comfort settings and optimized energy savings
- ★ Tighter exterior envelope seals a structure's exterior beyond Building Code Standards, minimizing heat loss, drafts, moisture, dust, pollen and noise
- ★ A drain water heat recovery (DWHR) pipe is a simple technology to save on energy used to heat water. This pipe takes advantage of the warm water flowing down the drains to preheat the water going into the hot water tank. Preheating the water reduces the amount of energy needed to heat the water to the set temperature.

★ ENERGY STAR®-qualified appliances operate efficiently to reduce energy costs

★ Sealed ductwork optimizes heating & air-conditioning airflow and improves air quality through every room

★ Higher efficiency furnace filters improve air quality, leading to a healthier and more comfortable home

★ LED Lighting, when applicable, helps reduce total energy usage

# THE ENERGY STAR® STORY

Since 1992, ENERGY STAR® has steadily become the world's most trusted symbol of energy-efficient homes. Its signature blue badge not only represents a home that's more environmentally friendly, but one that features a better build quality as well. Today, for a home to earn its coveted seal, it must prove to be at least 15% more energy efficient than local building codes.

**Mattamy is proud to build new homes with the power to make a difference. We're committed to doing our best for your family, as well as the world they live in.**
